

AUTOMARK SHADE PRINTER

Benefits of Automatic Printing

- * 1/2" tall, double-digit numbers are printed on the backside of material before it is spread onto the cutting table in order to eliminate shade errors.
- * This attachment replaces hand stamping and crayon marking, reducing cutting room personnel by 1-2 persons per spreading machine.
- * Cutting tables may be cleared immediately after cutting is complete which increases cutting room capacity and speeding the removal of cut parts.
- * Optional features include a variable speed motor drive to aid in tension free spreading (required with CRA System II, III & IV spreading machines), and quick change ink shafts for different colors.
- * Easily mounted on most manual or automatic spreading machines ranging from manual, including turn-table machines, to Niebuhr 750.
- * VMWs' Ink is 100% water-soluble and available in a variety of colors including invisible (seen with ultra-violet lamp).
- * Factory assistance is provided for new installations.
